<p>C85-014936 The compsn. consists of a highly water soluble cpd. obtd. by reacting a cpd. of formula R_1COOH (A) with a cpd. of formula $H_2N(CH_2)_l NH(CH_2)_m OH$ (B) and then reacting a cpd. of formula $(CH_3(CH_2)_n)_2SO_4$ (C) with the resultant reaction prod.. (A) and (B) are made to interact in a molar ratio of 1.0 : 0.77 to 1.5 at 140-220 deg.C. for 3 to 15 hours. In the formulae R_1 is 13-21C alkyl or alkenyl gp.; l is 2 or 3; m is 1 to 3; n is 0 or 1. The fatty acid of formula (A) is e.g. oleic, stearic, behenic, myristic and palmitic acid. the diamine of formula (B) is aminoethyl ethanolamine, aminopropyl propanolamine, aminoethyl methanolamine, aminoethyl propanolamine, etc.. (C) is dimethyl (diethyl) sulphate. ADVANTAGE - The compsn. has high water solubility or dispersibility and excellent flexibility-imparting and water absorbing properties. (5pp Dwg.No0/0)</p>
